No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a phosphodiesterase (PDE)-XIV enzyme. The CC phosphodiesterase polynucleotide and polypeptide may be used in the CC prevention, treatment and diagnosis of diseases associated with CC inappropriate PDE-XIV expression. For example, the polynucleotide CC be administered to treat diseases by rectifying mutations or deletions CC in a patient's genome that affect the activity of PDE-XIV. They may CC also be used to study the expression and function of PDE-XIV. They may CC polypeptides and their role in metabolism. The PDE-XIV polypeptides CC may be used as antigens in the production of antibodies against PDE-XIV CC PDE-XIV expression and activity. The anti-PDE-XIV antibodies and CC CPDE-XIV expression and activity. The anti-PDE-XIV antibodies and activity (i.e. the PDE-XIV gene and/or expression product may be cused in the preparation of a composition for the treatment of a disorder associated with inappropriate PDE-XIV expression and/or activity and to Screen for agents that can modulate PDE-XIV expression and or activity. The anti-PDE-XIV expression and or activity and to Screen for agents that can modulate PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity. The anti-PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity. The anti-PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity and to CC consisted with inappropriate PDE-XIV expression and or activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel human Phosphodiesterase type 7B CC polypeptide and the nucleic acid that encodes it. The protein and nucleic acid may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate phosphodiesterase 7B (P7B) expression. For CC disorders associated with inappropriate phosphodiesterase 7B (P7B) expression. For CC disorders associated with decreased expression by rectifying mutations CC or deletions in a patient's genome that affect the activity of P7B by CC expressing inactive proteins or to supplement the patients own CC production of P7B. The nucleic acids may be used to produce P7B CC polypeptides, by inserting the nucleic acids into a host cell and CC culturing the cell to express the protein. The nucleic acid and its CC complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and CC therefore which patients may be in need of restorative therapy. The P7B CC antibodies may also be used as antigens in the production of CC antibodies may also be used as antigens in the production of it's antibodies against P7B and in assays to identify modulators of it's antibodies may also be used as diagnostic agents for detecting the anti-P7B and in assays to identify modulators of it's antibodies may also be used as diagnostic agents for detecting the or researce of P7D in amminer (a not of the production of the protein assay also be used as diagnostic agents for detecting the or researce of P7D in amminer (a not of the protein anti-P7B and in a protein assay to identify the protein assay to be used as diagnostic agents for detecting the protein assay and activity. The anti-P7B and in the protein activity that the protein activity that the protein anti-P7B and in a protein and activity the protein activity that the protein activity that the protein and activity the protein activity that the protein and protein activity that the protein and protein and protein and protein and prot

(I) can have nootropic, cardiant, hypotensive, nephrotropic, antidepressant, antiinflammatory, immunosuppressive, nephrotropic, antiasthmatic and vasotropic activities, and can be used in gene therapy. (I) can be used for treating various disorders associated or mediated by (I), such as dementia, amnesia, congestive heart failure, thrombosis, pulmonary hypertension, glomerulonephritis, bipolar depression, bronchial asthma, atopic diseases, autoimmune encephalomyelitis, organ transplantation, salt retention in nephrotic syndrome and erectile dysfunction.

                                                                                                                                                                                                                                                                          The present sequence encodes a phosphodiesterase (PDE)-XIV enzyme. The CC phosphodiesterase polynucleotide and polypeptide may be used in the prevention, treatment and diagnosts of diseases associated with the characterion of the polynucleotide company to the administered to treat diseases by rectifying mutations or deletions of inappropriate PDE-XIV expression. For example, the polynucleotide company and their role in metabolism. The PDE-XIV polypeptides and their role in metabolism. The PDE-XIV polypeptides composed to study the expression and function of pDE-XIV polypeptides composed to dentify modulators (agonists and antagonists) of pDE-XIV expression and activity. The anti-PDE-XIV antipodies and composition for the preparation of a composition for the treatment of a disorder associated with inappropriate PDE-XIV expression and/or activity and to sorder associated with inappropriate PDE-XIV expression and/or activity and to sorder the anti-PDE-XIV expression and or activity. The anti-PDE-XIV expression and/or activity and to sorder associated with inappropriate PDE-XIV expression and/or activity and to sorder the anti-PDE-XIV antipodies may also be used as diagnostic agents for detecting the presence of PDE-XIV polypeptides in samples (e.g. by company all inked immunosorbant assay (ELISA)).
                                                                                                                 Query Match

                                                                                                                                                                                                                                                     The present sequence represents a phosphodiesterase (PDE)-XIV cDNA. phosphodiesterase polynucleotide and polypeptide may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PDE-XIV expression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletic in a patient's genome that affect the activity of PDE-XIV. They may also be used to study the expression and function of PDE-XIV polypeptides and their role in metabolism. The PDE-XIV polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (PFIZ )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1261
                                                                                                                may be used as antigens in the production of antibodies against PDE-XIV and in assays to identify modulators (agonists and antagonists) of PDE-XIV expression and activity. The anti-PDE-XIV antibodies and PDE-XIV antagonists may also be used to down regulate PDE-XIV expression and activity (i.e. the PDE-XIV gene and/or expression product may be used in the preparation of a composition for the treatment of a disorder associated with inappropriate PDE-XIV expression and/or activity and to screen for agents that can modulate PDE-XIV expression and or activity. The anti-PDE-XIV antibodies may also be used as diagnostic agents for a control of the preparation of a composition of a composition and or activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
The invention relates to a novel human Phosphodiesterase type 7B polypeptide and the nucleic acid that encodes it. The protein and nucleic acid may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate phosphodiesterase 7B (P7B) expression. For example, The protein and nucleic acid may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P7B by expressing inactive proteins or to supplement the patients own production of P7B. The nucleic acids may be used to produce P7B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1505
                                                                                                                                                                                                                                                                                                                   Phosphodiesterase 7B proteins and nucleic acids, useful for preventing, diagnosing and treating, e.g. asthma, inflammation and allergies -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                culturing the cell to express the protein. The nucleic acid and its complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and complements may also be used as DNA probes in diagnostic assays to detect therefore which patients may be in need of restorative therapy. The P7B completion and activity. The antigens in the production of complete may also be used as antigens in the production of complete may also be used as antigens in the production of complete may also be used as antigens and antagonists may complete to down regulate expression and activity. The anti-p7B antibodies and antagonists may complete to down regulate expression and activity. The anti-p7B continuous completes (e.g. by enzyme linked immunosorbent assay (EIISA)). Disorders that may be prevented, diagnosed and/or treated by the above methods include, for example cardiovascular disease, asthma, altergy, inflammation, and immune-related disorders. The present complete cardiovascular disease, asthma, as a common content of the present complete cardiovascular disease, asthma, as a common content as a phosphodiesterase 7B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
The present sequence represents a phosphodiesterase (PDE)-XIV cDNA. The phosphodiesterase polynuclectide and polypeptide may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PDE-XIV expression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of PDE-XIV. They may also be used to study the expression and function of PDE-XIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1168

The PDE-XIV polypeptides may be used as antigens in the production of antibodies against PDE-XIV and in assays to identify modulators (agonists and antagonists) of PDE-XIV expression and activity. The anti-PDE-XIV antibodies and PDE-XIV expression and activity (i.e. the PDE-XIV gene and/or expression product may be used in the preparation of a composition for the treatment of a disorder associated with inappropriate PDE-XIV expression and/or activity and to screen for agents that can modulate PDE-XIV expression and or activity. The anti-PDE-XIV antibodies may also be used as diagnostic agents for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          detecting the

                                                                                                                                               The present sequence encodes a phosphodiesterase (PDE)-XIV enzyme. The CC phosphodiesterase polynucleotide and polypeptide may be used in the CC prevention, treatment and diagnosis of diseases associated with CC inappropriate PDE-XIV expression. For example, the polynucleotide CC in appropriate PDE-XIV expression. For example, the polynucleotide CC in a patient's genome that affect the activity of PDE-XIV. They may CC also be used to study the expression and function of PDE-XIV. They may CC polypeptides and their role in metabolism. The PDE-XIV polypeptides CC may be used as antigens in the production of antibodies against PDE-XIV CC and in assays to identify modulators (agonists and antipolists) of CC PDE-XIV expression and activity. The anti-PDE-XIV antipolists may also be used to down regulate PDE-XIV expression CC associated with inappropriate PDE-XIV expression product may be CC used in the preparation of a composition for the treatment of a disorder CC associated with inappropriate PDE-XIV expression and or activity. The anti-PDE-XIV expression and or activity. The anti-PDE-XIV expression and or activity and to CC The anti-PDE-XIV antipoles may also be used as diagnostic agents for CC detecting the presence of PDE-XIV polypeptides in samples (e.g. by CC enzyme linked immunosorbant assay (ELISA)).

(I) can have nootropic, cardiant, hypotensive, nephrotropic, antidepressant, antiinflammatory, immunosuppressive, antiinfertiilty, antiasthmatic and vasotropic activities, and can be used in gene therapy. (I) can be used for treating various disorders associated or mediated by (I), such as dementia, amnesia, congestive heart failure, thrombosis, pulmonary hypertension, glomerulonephritis, bipolar depression, bronchial asthma, atopic diseases, autoimmune encephalomyelitis, organ transplantation, and transplantation, and transplantation in appropriate such as the second content of the

DNA mols. isolated from human glioblastoma cells - RAS-related or cyclic nucleotide phosphodiesterase proteins

Claim 4; Column 67-70; 101pp; English.

The sequences given in AAT34374-76 represent plasmid fragments which contain human glioblastoma cell cDNA inserts which are capable of correcting the heat shock sensitivity of the phosphodiesterase deficient yeast strain 10DAB. Several cDNA's were isolated and sequenced. pTM22 encodes a novel human gene. From computer analysis, pTM22 putatively encodes a protein homologous to various cAMP phosphodiesterases, such as the bovine Ca2+/Calmodulin dependent cAMP phosphodiesterase and the rat DPD phosphodiesterase. Sequences relates to pTM22 were found to be expressed in human heart. Plasmid pTM22 was unable to correct the heat shock sensitivity of RAS2(vall9) yeast Sequences related Plasmid pTM22 was val19) yeast

It thus appears that the pdel- and pde2- yeast strain 10DAB is more sensitive to phenotypic reversion by mammalian cAMP phosphodiesterase clones than is the RAS2(vall9) yeast strain. The inserts in the plasmids pTM3 and pTM72 were also characterised. Thes two different cAMP phosphodiesterase cDNA's were found to be closely related to, but distinct from, the pRATDPD insert and the pJC99 inser Blochemical analysis of cell lysates has established that the cDNA's pTM3 and pTM72, pJC44x and pRATDPD encode rolipram sensitive cAMP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       phosphodiesterases

The present invention describes new isolated RAS-related polypeptic and mammalian cyclic nucleotide phosphodiesterases (PDES). RAS-related polypeptides are capable of complementing a defective RAS function yeast. The products can be used for screening for agents which can modify, complement or suppress a genetic defect in a biochemical
